Objective

I am a Data Engineer with hands-on experience building real-world data platforms. I have worked extensively with Python, SQL, Apache Spark, and Databricks, designing end-to-end data pipelines that handle real enterprise data at scale. I have built and supported production systems using Azure Data Factory, Azure Synapse, Azure SQL, and AWS services.

Education

CMR Technical Campus, Hyderabad 2021 – 2025
Bachelor of Technology, Computer Science and Data Science

Skills

- **ETL Pipelines:** PySpark, SQL-based ETL workflows
- **Data Platforms:** Databricks, Snowflake
- **Cloud Platform:** Azure (Data Lake ADLS Gen2, Databricks, Azure Data Factory, Azure Synapse)
- **Languages and Tools:** Python (Pandas, PySpark), SQL, Power BI, Advanced Excel
- **Collaboration:** Git, JIRA, Agile methodologies
- **Soft Skills:** Communication, Analytical Thinking, Problem-Solving, Collaboration

Projects

Azure Data Engineering Pipeline – Netflix Dataset *ADF, PySpark, SQL, Databricks*

- Designed and deployed an end-to-end Medallion Architecture pipeline processing 10M+ records across Bronze, Silver, and Gold layers, reducing data processing time by 40%.
- Implemented Unity Catalog for centralized data governance across 5+ data domains, enforcing role-based access control and securing 3 external storage locations.
- Engineered advanced PySpark transformations (Dense Rank, aggregations, schema evolution), improving query performance by 35% over baseline SQL workflows.
- Integrated processed datasets with Power BI dashboards serving 3+ business teams, enabling self-service analytics and reducing ad-hoc reporting requests by 50%.

End-to-End Medallion Architecture Pipeline *ADF, Azure DevOps, Git, ARM Templates*

- Built a production-ready 3-layer Medallion Architecture (Bronze, Silver, Gold) using ADF, orchestrating 10+ pipelines from raw ingestion to business-ready serving layers.
- Automated CI/CD via Azure DevOps and Git with ARM templates, reducing deployment time by 60% and eliminating manual configuration errors across environments.
- Configured real-time alerting through Logic Apps, achieving 99.9% pipeline uptime and cutting mean time to detect (MTTD) failures by 70%.

Customer Retention Analytics Dashboard *Power BI, DAX*

- Consolidated 4 data sources (demographics, transactions, loyalty, churn) into a unified Power BI dashboard, reducing reporting time from days to under 2 hours.
- Delivered 8+ KPIs including churn rate, CLV, and repeat purchase tiers, providing actionable insights that informed retention strategies for 3 customer segments.
- Optimized 15+ DAX measures (CALCULATE, DIVIDE, RANKX, SUMMARIZE) for segmentation and CLV analysis, improving dashboard load time by 30%.

Certifications

- Google Cloud Data Analytics Certificate
- GenAI for Data Analytics – Coursera
- HackerRank Certification – SQL and Python
